

## Qubi DA2 Acoustic Wall Tie/Brace

Product Data			
Part No	A	Cavity 'C'	Embedment Depth 'D'
DA2003.100	93.5	50 & 75	90 & 82.5

### Product Description:

A high-performance acoustic isolation brace incorporating advanced thermoplastic elastomer provides outstanding compression set, UV resistance, and elevated temperature performance, making it ideal for decoupling wall systems in acoustically sensitive and demanding environments.

## Key Features

- **High Acoustic Isolation:**

Effectively decouples wall structures to minimize structure-borne sound transmission.

- **Consistent Vibration Damping:**

Maintains acoustic performance over time with excellent compression set and long-term elasticity.

- Broad Frequency Performance:**

Reduces low to mid-frequency vibration transfer—ideal for residential, commercial, and studio applications.

- **Durable & Stable:**

Performs reliably in a wide range of temperatures and environments without degradation.

- Easy to Integrate:**

Compact and installation-friendly design  
compatible with standard wall systems  
(metal or timber studs)
